Subject: Statement Regarding PPWR conformance

EU Packaging and Packaging Waste Regulation [(EU) 2025/40] (PPWR)

Under the PPWR, the combined total concentration limit for lead, cadmium, mercury and hexavalent chromium is 100 mg/kg by weight. The limit applies universally to all packaging types and packaging components.

Additionally, and specifically for food contact packaging: PPWR sets strict maximum concentration limits for per- and polyfluoroalkyl substances (PFAS). The thresholds are 25 ppb for any single non polymeric PFAS, 250 ppb for the sum of non-polymeric PFAS, and 50 ppm for total fluorine including polymeric PFAS.

HMG Powder Coatings Ltd confirms that, based on our current material specifications, supplier information and declarations available to us, per- and polyfluoroalkyl substances (PFAS) are not intentionally added to, and are not known to be present in, the packaging used for our products. Packaging does not contain lead, cadmium, mercury or hexavalent chromium.

This statement applies to all packaging components supplied with our products, including cardboard cartons, plastic liners, bags, labels and closures.

This declaration is based on information available to HMG Powder Coatings Ltd as of the date below.
